WEATHER FORECASTS FOR ALBANIA, 1 - 31 DECEMBER 1950

The Central Institute of Weather Forecasts in Moscow issues the following forecasts for Albania. All temperatures are given in centigrade. An asterisk indicates that, because of the illegibility of the original, it could not be determined whether the temperatures were plus or minus 7.

1 - 7 December

Moderate to dense cloudiness. Occasional rains and local fog. Moderate to strong winds from the south and southwest with a velocity of 3-7 meters per second, and in some places up to 9 meters per second. Temperature, minus 13 degrees in the mountains, minus 18* in the lowlands.

8 - 19 December

Increasing cloudiness, moderate to dense. Occasional rain. East winds, 3-7 meters per second.

At the beginning of the period, the temperature will fall to between 1 and minus 4 degrees, then will rise to between 3 and 13 degrees, and finally drop to minus 1 in the lowlands and minus 6 in the mountains.

20 - 31 December

Continued overcast with moderate to dense clouds. Occasional rain and fog. Winds from various quarters, becoming stronger in the second half of the period, and blowing from the northeast with a velocity of 3-7 meters per second.

Temperature rising to 5* degrees in the mountains and 10* elsewhere.
